

LIVE REMOTE INTERPRETING

The VoiceShell Ecosystem

VoiceShell is MSM's technology ecosystem for multilingual communication, combining interpreting expertise with digital solutions for in-person, remote, virtual and hybrid events.

From remote interpreting in a meeting room to AI-powered multilingual communication and fully customised online streaming, our solutions are designed around the way your event actually works.

One partner. Different ways to connect.

Multilingual communication, without changing the way you work.

MSM VOICESHELL

Our Solutions

Not every event needs the same technology.

You may need an interpreter to join your event remotely for just one day. You may need a local system for a guided visit. You may want to introduce AI-powered interpreting for selected languages. Or you may simply need a customised multilingual interface for an online event.

VoiceShell brings these possibilities together in one ecosystem.

If you are planning an event and need guidance on the right communication solution, our experts can help. We look at your event format, audience, languages and technical requirements to identify the most suitable combination of interpreting, technology and support.

AudioShell

Remote interpreting for in-person events.

Add simultaneous interpreting to an event without requiring the interpreter to travel with your group.

EasyShell

On-site interpreting through a local system.

A practical alternative to traditional tour guide systems, with the interpreter and audience in the same location.

AudioShell AI

AI-powered interpreting and subtitling. Use AI-powered simultaneous interpreting and subtitling where the context is appropriate — with the option to combine AI and professional interpreters within the same app.

VideoShell

Multilingual streaming for virtual and hybrid events.

Add simultaneous interpreting to your existing webinar platform or deliver your event through a customised multilingual streaming experience.

AudioShell

Remote interpreting for your in-person event.

Simultaneous interpreting, directly on your audience's devices.

HOW IT WORKS

01. Access

Participants scan a QR code to access the event's audio channels through the AudioShell app.

02. Select

They select their preferred language from the available channels and connect their headphones or earphones.

03. Listen

The interpreted audio starts streaming in real time.

Participants can use their own smartphone or tablet and headphones, without the need for dedicated interpretation receivers.

If interpretation is required for only one meeting, presentation or visit within a longer programme, the interpreter can join remotely when their expertise is needed – without the travel and accommodation costs of keeping them on site for the entire itinerary. AudioShell allows you to bring the interpreter in remotely for the specific sessions where interpretation is required, rather than building the entire programme around their physical presence.

With AudioShell, participants who need another language can listen through their own smartphone and headphones, while everyone else can continue following the event in the original language without the need for an A/V service on site.

AudioShell AI

Human expertise and AI in the same environment

**Simultaneous interpreting, directly on
your audience's devices.**

HOW IT WORKS

01. Access

Participants scan a QR code to access the event's audio channels through the AudioShell app.

02. Select

They select their preferred language from the available channels and connect their headphones or earphones.

03. Listen

The interpreted audio starts streaming in real time.

Participants can use their own smartphone or tablet and headphones, without the need for dedicated interpretation receivers.

Some languages or sessions may require the expertise and nuance of a professional interpreter, while others may be well suited to AI-powered voice translation or live subtitling.

Professional interpreting and AI-powered translation can also be combined.

For example, your main audience can follow a professional Italian interpreter, while an English-speaking speaker receives AI-generated Italian to English translation directly on their device so that they may follow the entire event, all in the same environment, keeping the participant experience simple and consistent.

EasyShell

The convenient alternative to A/V services

Simultaneous interpreting, directly on your audience's devices.

HOW IT WORKS

01. Access

Participants scan a QR code to access the event's audio channels through the AudioShell app.

02. Select

They select their preferred language from the available channels and connect their headphones or earphones.

03. Listen

The interpreted audio starts streaming in real time.

Participants can use their own smartphone or tablet and headphones, without the need for dedicated interpretation receivers.

LocalShell gives you an alternative to conventional tour guide systems, helping you organise interpreted visits and activities without making AV logistics the centre of your planning.

The result: a smoother experience for your group, with multilingual communication that fits the event, not the other way around.

VideoShell

Add multilingual communication to your online event

Simultaneous interpreting directly on your platform.

If your event is already running online, you do not need to change the platform your team and audience are familiar with. VideoShell allows you to add simultaneous interpreting to your existing webinar or event platform and provide participants with access to multiple languages.

Depending on the format and level of customisation required, VideoShell is available in different configurations.

VIDEOSHELL BASIC

Use your existing webinar platform and provide participants with access to the multilingual event through a password-protected VideoShell page.

Up to five languages can be provided, together with protected Q&A and post-event questions in a personalised format.

VIDEOSHELL PLUS

VideoShell Plus includes the Basic configuration and adds a personalised, event-coded and password-protected webpage from which the online event is broadcast.

The event can also be recorded with all available language channels.

VIDEOSHELL EMBEDDED

For organisations that want the multilingual experience directly on their own website, VideoShell Embedded allows the live multilingual broadcast to be integrated through a fully personalised widget.

MSM VOICESHELL

DESIGNED FOR BUSINESS

**Clear communication.
Practical implementation.**

VoiceShell is designed to support the operational requirements of professional events, from access and participant experience to privacy and technical coordination.

CONTACTS

Feel free to get in touch to ask any questions you may have or to discuss your ideas and projects. Please contact us using one of the following methods:

**+39 3482648884
INFO@MSMSAS.COM**

ENCRYPTED COMMUNICATION

Audio streams are fully encrypted end-to-end to protect the privacy and confidentiality of event content.

PARTICIPANT ANONYMITY

No personal participant data is collected, stored or processed by the app.

EU-BASED INFRASTRUCTURE

Servers are located within the European Union, supporting the requirements of organisations concerned with data sovereignty and privacy.

ACCESS CONTROL

Event streams can be protected with an optional password to provide an additional level of confidentiality for private meetings and events.

SIMPLE FOR PARTICIPANTS

Once the event has been prepared, accessing the interpretation is straightforward.

Scan. Select. Listen.

Participants scan the QR code provided for the event, select their preferred language and listen through their own headphones or earphones.
